## TEALWATCH® VIEWER INSTRUCTIONS

### *How Do I Use the TEALwatch® Viewer?*

To use the TEALwatch® Viewer, follow these simple steps:

1. Save the datafiles from the TEALwatch® Power Monitor that you are interested in. From the STATUS page within the TEALwatch® power monitor web site interface, click on either "Download All Files", "Download Trend Data" at the bottom of the status page, or select an individual event by clicking the full "Download" button of an individual event. Save these files to a known folder or location on your local drive or network (and remember where you save them). A file name is generated automatically, but you can modify the filename to help identify it. Please note that the filename cannot contain any special characters or spaces. TEAL recommends that you not modify the filename, but rather save the data files into an appropriately named folder that will help you identify the files origination at a later date. These files can take a few minutes to download.

2. Open the TEALwatch® All Data Viewer file. When the Viewer is opening, you must select "ENABLE MACROS" to allow the Viewer to use it's built-in macro programming to automatically format data files. Most anti-virus software disables the Excel Macro function, but it must be enabled to use the Viewer. You may need to change your security settings under the TOOLS menu of Excel, select MACROS, and set your security setting to the mid-level and ENABLE MACROS.

#### TO VIEW EVENTS...

3. With the Viewer open, select the Excel tab at the bottom of the page for EVENT CHART.

4. Click on the IMPORT button in the center at the bottom of the Viewer page to import either an individual event or the "AllEvent.dat" file (from where you saved the file as described above). You can select between the different waveforms with the selection buttons at the bottom of the page.

5. Each waveform is scaled individually.

6. When closing, DO NOT SAVE, as this adds the present data to the file, possibly making the file very large.

#### TO VIEW TRENDS...

7. Select the Excel tab at the bottom of the page for TREND CHART.

8. Click on the IMPORT button in the center at the bottom of the Viewer page to import the "Trend.dat" file (from where you saved the file as described above). You can adjust the resolution for both amplitude and time duration of the trend data with the selection buttons at the bottom of the page.

9. When closing, DO NOT SAVE, as this adds the present data to the file, possibly making the file very large.

*NOTE: In the event that any of the Products supplied by the Supplier (TEAL Electronics Corporation) include Software, Supplier agrees that the Customer shall have a perpetual, royalty free, world-wide license to use such Software when used with TEAL authorized hardware. TEAL reserves the right to request a fee for software upgrades that would add features or functionality to the original software. For the avoidance of doubt, any license granted pursuant to this clause shall continue notwithstanding termination of this agreement.*
